### Tabulating Varieties

In making a division by color, we first separated the decided shades, like purple, lilac, yellow and white. So many desirable yellows and smoke or bronze sorts appeared that all not really yellow were put together in a class as bronze. For the same reason the lilac shades were divided into blue lilac and pink lilac. Finally those not included with the others, having a light colored ground variously mottled or penciled, for want of a better name were called "frilled." The universally known Madame Chereau belongs to this class.

When the standards vary from the falls the bloom is classified according to the standards. A preference is given to those whose standards and falls are of a general similar shade, as when massed they best carry out a decorative color scheme, though some representatives of two-color effects, like Rhein Nixe, are retained.

In each of these seven color divisions we install in their relative order of blooming the

### Frilled

**7.4 Mme. Chereau** (Lemon 1844) 36 inches. Midseason. S. white deeply and elegantly frilled lobelia blue, F. white bordered blue. Style arms bright blue. Many new frilled varieties continue to be introduced, but this one remains a favorite. Keeps well. 1 root, 25c; 5 at 15c each; 25 at 10c each.

**8.1 Ma Mie** (Cayeux 1906) 38 inches. Midseason. S. & F. pure white with ruffled border delicately penciled blue when closely observed. An improved Madame Chereau. Style arms blue. 1 root, 50c; 5 at 40c each; 25 at 30c each.

**7.9 Parisiana** (Vilmorin 1911) 30 inches. Early. S. lavender pink mottled all over, F. creamy white center very heavily bordered with lavender pink. A most striking and unusual but highly pleasing effect. 1 root, 50c; 5 at 40c each; 25 at 30c each.

**7.8 Mary Garden** (Farr 1913) 28 inches. Late. S. "Pale yellow flushed pale lavender, F. creamy white minutely dotted and veined maroon; stigmas clear yellow." Farr. An elegant flower of distinct, iridescent effect. 1 root, 75c; 5 at 60c each; 25 at 50c each.

**8.3 Dimity** (Bliss 1919) 36 inches. Midseason. "A strong growing variety with tall branching spires. S. white slightly veined and pencilled mauve. F. wide, long and spreading of fine shape faintly veined with lavender towards the upper half. Most distinctly." Wallace. Single root, \$6.00.

absolutely unassailable varieties. Each new candidate must demonstrate its individual merit as a novelty or its superiority over a kind now on the list, to be accepted. The favorable traits considered are, good foliage, strong, straight stems, freedom of blooming, size of single flower, lasting qualities, fragrance, being fast multipliers and having hardy constitutions.

### Elimination

Take Iris Cordelia, a choice, rich purple of the same shade and effect as Monsignor; when they are blooming side by side people always prefer Monsignor. We therefore, after growing Cordelia for five years, sold out our complete stock.

The list of frilled sorts is culled from thirty different forms, all pleasing but not essential.

A delicate pastel shade like Cherubim soon bleaches in the field to white and gives way to Lohengrin, which is more enduring.

**Semi-double**—Having several rows of wide petals with the center loosely intermixed with stamens and petals.

**Crown**—Having wide petals in the center with a choker of narrow short petals, encircling same, and an outer row of large guard petals.

**Bomb**—All center petals of uniform width, forming a globe enclosed in a row of large guard petals.

**Semi-rose**—Petals all uniformly wide, interspersed with a few pollen-bearing stamens.
